Commercial fishermen from Bristol Bay and around the country sent a strong message to President Obama – release the draft Watershed Assessment now. Earlier this year, the EPA announced another round of review and public comment on the Bristol Bay Watershed Assessment and now commercial fishermen are urging the EPA to jumpstart the process. With another round of review, commercial fishermen fear their voices will not be heard during the busy summer schedule of fishing Bristol Bay. They urge a release by March 19th to allow adequate time to comment before fishing season starts.

Media outlets including KDLG radio quoted the letter to the President from Commercial Fishermen for Bristol Bay: "Our work begins in late spring and continues virtually non-stop through the summer months. The timing of the second peer review could result in the public comment period occurring while the fishermen who would be most affected by the Pebble Mine are in the region earning their living."

Two people wrote letters to the editor in the Homer News to praise Senator Begich's support of EPA's scientific assessment. Both writers note the importance of the salmon fishery for 14,000 American jobs and the well-being of Alaskans. Referring to the Pebble project, Sean Ruddy wrote: "The Bristol Bay watershed is one of the most dynamic, seismological and hydrological networks in the world; if their project won't qualify for the permits, we should all know that now before any more time is wasted."

Finally, later this month the New England Aquarium hosts chef and National Geographic fellow Barton Seaver, who will talk about the importance of Bristol Bay salmon and the fishermen who harvest them.
